Tribeca Jets CRM

Module Issues Explained

Overview

This doc explains every open issue in plain language, module by module: what's wrong, why it matters to the business, and what the developers should change. 26 of the 33 Completed modules have at least one open issue. 7 of them fail outright.

The # numbers match the issue log in the QA Test Report v2.0. Severity: **High** = a feature doesn't work, money is wrong, or there's a security risk. **Medium** = wrong behaviour or a missing rule, with a workaround. **Low** = missing field checks, wording or layout.

Result	Modules
Fail	7: Uploads, Document Vault, Clients, Client Credits, Quotes, Receivables, Notification
Pass, with issues	18
Not fully tested	2: Auth & Sessions (has open issues), Permissions (needs a login per role)
Pass, no open issues	6: Operators, Trip Requests, Schedule, Operator Payments, Transactions, Task Board

Tested Oct 11–13, 2026, as Super Admin, using records labelled TEST.

Failing modules

These 7 modules can't be signed off until their issues are fixed. Four of the five open high-severity issues are here. The fifth (#5) is under Auth & Sessions.

Uploads and Document Vault — #6 (High)

- **Problem:** any file type is accepted. The form says “PDF, Word, Excel, text, or a photo”, but a Windows program file (test_bad.exe) uploaded and was filed.
- **Why it matters:** someone could upload malware disguised as a document. The vault holds passports, IDs and contracts, and files can also be published to the partner portal.
- **Fix:** allow only the listed file types, checked on the server by the file's real contents, at every upload point (vault, client, trip and operator documents, aircraft photos, itinerary import, portal resources, logo). Add a size limit and a clear rejection message.

Clients — #3 (High), #29 (Medium)

- **#3 problem:** Schedule Follow-up fails every time with “Validation failed (uuid is expected)”, with or without a broker chosen.
- **Why it matters:** brokers can't set call-back reminders, so the Dashboard's Upcoming Follow-ups and the Follow-ups Due counters never fill up and leads get forgotten.
- **#29 problem:** a client who booked and paid still shows as Lead, stage New. The summary strip (trip type, operator, aircraft, departure) shows “—”.
- **Why it matters:** the client list and pipeline make paying clients look like new enquiries, and Active/VIP filters miss them.

- **Fix:** send the broker ID correctly (or leave it out) when scheduling. Move the client to Active and the lead stage forward when they're quoted and when they book. Fill the summary strip from their latest trip.

Client Credits — #7 (Medium), #15 (Low)

- **#7 problem:** add $1,000 on account, use $300, then withdraw the $1,000 entry. The balance becomes -$300, with no confirmation.
- **Why it matters:** the client appears to owe credit that never existed, so the ledger can't be trusted.
- **#15 problem:** credit movements don't appear on the client's Activity timeline.
- **Fix:** block, or warn about, any withdrawal that would take the balance below zero. Ask for confirmation, and log each movement on the timeline.

Quotes — #4 (High), #24, #27, #11 (Medium), #21, #32 (Low)

- **#4 problem:** FET is counted as income. A $11,400 charter costing $9,500 shows $2,755 profit and 22.5% margin. The correct figures are $1,900 and 16.7%.
- **Why it matters:** every profit, margin and commission figure is overstated. This flows into Trips, Reports, the Dashboard and Commissions.
- **#24 problem:** Edit Quote → Save Changes failed with “Use a YYYY-MM-DD date”, even with no changes. Seen on a copied draft.
- **#27 problem:** linking an enquiry to a new quote doesn't bring in the operator, aircraft and cost already approved in Operator Sourcing, so they have to be retyped.
- **#11 problem:** a deposit larger than the quote total was accepted. It couldn't be retested because of #24.
- **#21 / #32 problems:** Book Trip only appears on the quote's detail page. The client's requirements (e.g. “Catering for 4”) appear under Terms on the client's quote, and the preview title reads “QUOTES”.
- **Fix:** profit = base price + extras − operator cost, with FET kept separate. Fix the date format on edit. Carry the sourcing result into the quote. Cap the deposit at the total. Keep requirements internal.

Receivables — #23 (High)

- **Problem:** after a 50% deposit invoice, “Bill the full trip” filled in the full $11,400 + $855 again. The system allowed $18,383 to be invoiced on a $12,255 trip.
- **Why it matters:** a client could be billed twice for the same flight.
- **Fix:** fill in only the amount not yet invoiced, and block invoices that would push the total past the trip price. The overpayment and invoice-total guards already work well.

Notification — #33 (Medium)

- **Problem:** your team confirmed Notifications & Automation isn't built yet. The bell only shows due tasks. CRM & Quote Defaults save correctly but aren't applied: a new quote ignores the default markup, validity, FET switch and terms, and new leads ignore the default stage and follow-up interval.
- **Why it matters:** nobody gets flight, payment or quote-expiry alerts, and the defaults screen gives a false sense that defaults are in place.
- **Fix:** connect the quote, lead and client forms to the saved defaults. Either build the alerts or mark Notification as In Progress on the status sheet.

Pass with issues: Sales & CRM

The main sales flow works: lead → trip request → ask operator → record price → approve. These are the gaps around it.

Leads & Agents — #12, #13 (Medium), #16 (Low)

- **#12 problem:** a lead can be saved with the same airport for From and To (e.g. KTEB → KTEB). That creates a nonsense trip request.
- **#13 problem:** the Lead Stage options differ between Add Client (New, Contacted, Quoted, Negotiating, Booked, Lost) and Add Lead (New, Contacted, Qualified, Proposal, Quoted, Won, Lost).
- **#16 problem:** “Active Agents” counts invited users who have never signed in.
- **Why it matters:** the pipeline stages and counts don't line up, so reports by stage are unreliable.
- **Fix:** block identical From/To airports, use one shared stage list, and count only active users.

Operator Sourcing — #28, #36 (Medium)

- **#28 problem:** “Source in Operators” on a trip request opens the sourcing list filtered on “3”, which finds nothing. Searching for “TR-3” also finds nothing, even though the search box says it searches by reference.
- **#36 problem:** Ask an Operator says “Request sent”, but no email reached the operator (tested with a real Gmail address) and nothing appears in the Sent log.
- **Why it matters:** the broker believes operators have been asked for a price when they haven't, and could lose the charter waiting.
- **Fix:** filter by the full reference, make reference search work, and send and log the operator request email (or say clearly that it only records the request).
- **Fixed:** approving an operator before they've given a price is no longer possible (#8). Record response works well.

Notes / Timeline — #15 (Low)

- **Problem:** client notes now save correctly (#2 fixed), but credit movements, bookings and payments don't appear on the client's timeline. An earlier edit also listed raw field names (“type, status, companyName…”) instead of what changed.
- **Fix:** log the money events, and describe changes in plain words.

Referrals — #34 (Low)

- **Problem:** referrals can only arrive through the partner portal, so there's no way to log one an agent phones in. A lead with source “Referral” doesn't create a referral record either. Publishing and removing portal resources works.
- **Fix:** add a manual “Add Referral”, or link a lead to a referral agent.

Pass with issues: Operations and Finance

Booking, invoicing, paying operators and paying commission all work end to end. The issues are missing safety checks and the FET error (#4), which runs through every money screen.

Trips — #4 (High), #9, #26 (Medium)

- **#9 problem:** Mark Confirmed works with the operator still Pending, no passengers named and no departure time. The trip's own confirmation checklist is ignored.

- **#26 problem:** Mark Departed and Mark Completed went through in one click each, 4 days before departure. The trip was completed while $4,500 was still owed to the operator and half the trip hadn't been invoiced.
- **Why it matters:** trip statuses can say a flight happened when it didn't, and open balances are easy to miss.
- **Fix:** check the confirmation list before Confirmed, block Departed/Completed before the departure date, and warn about unpaid or uninvoiced amounts. Also add a departure time field to trips.

Itineraries — #22, #26 (Medium)

- **Problem:** itineraries build and email well. But there's nowhere to enter a departure time (it shows “Time not set”), and the passenger column shows “—” when names aren't entered. If an email fails, the itinerary is still marked Sent (#22).
- **Fix:** add departure time, show the passenger count, and only mark Sent when the email goes through.

Flight Tracking — #25 (Medium)

- **Problem:** status is typed in by hand (there's no live feed). A flight due Oct 16 could be set to “Landed” on Oct 12. The page then showed “Landed Today 1”, and the trip stayed Confirmed.
- **Fix:** don't allow Departed/Landed before the departure date, and keep the trip status in step with the flight status.

Empty Legs — #31 (Low)

- **Problem:** matching works: an empty leg Palm Beach → Teterboro found the matching request. But the Dashboard and the Empty Legs counters say “0 matched” while the card says “1 match”.
- **Fix:** use the same match count everywhere.

Commissions — #4 (High), #30 (Low)

- **#4 effect:** 10% of profit came to $275.50 instead of $190, because FET was counted as profit. The broker is overpaid by about 45%.
- **#30 problem:** Mark Paid Today records a payment with no method or reference, and no confirmation. The commission also stayed Pending after the trip was completed instead of becoming Earned.
- **Fix:** fix #4, ask for the payment method and reference, and set Earned automatically when the trip completes.

Reports and Dashboard — #4 (High), #31 (Low)

- **Problem:** revenue, profit and margin include FET, e.g. profit $2,755 instead of $1,900 at 22.5% margin. “Outstanding AR $0” also hides money the client still owes when part of a trip hasn't been invoiced yet.
- **Fix:** fix #4, and show the uninvoiced balance alongside receivables. Report exports weren't tested because they download files.

Receivables (other checks)

- Overpayment is blocked, and an invoice total can't be lowered below what's been paid. Only the over-invoicing problem (#23) remains, covered under Failing modules.

Pass with issues: Setup, Users, Auth and Communication

Auth & Sessions — #5 (High), #35 (Low)

- **#5 problem:** the browser's saved data for this site (localStorage) still holds staff names with plain-text passwords (key tjcc_broker_accounts_v1), plus old trip and client data from an earlier version.
- **Why it matters:** anyone using that computer can read them. If those passwords are real, they're exposed.
- **#35 problem:** the sign-in page shows made-up figures ("240+ Active Clients, $18M YTD Revenue, 96% Trip Success"), and the invite email contains a starting password. The owner's name is now fixed ("Ari Wohl").
- **Fix:** clear the old browser data on load and reset any real passwords that were stored. Remove or replace the sign-in figures. Send an invite link where the user sets their own password.
- **Working:** pages refuse access without a login, the login cookie can't be read by page scripts, and you're logged out after 10 minutes idle.

Users & Roles and Permissions — #17, #34 (Low)

- **Problem:** the invite phone field accepts "abc" (#17). The owner (Super Admin) isn't offered as a broker, so leads and trips can't be assigned to them (#34).
- **Fixed:** invalid emails are now rejected with a clear message (#10), and pending invites can be withdrawn (#14).
- **Permissions:** the per-role permission editor works. Whether each role is actually limited couldn't be tested without a login for each role.

Settings — #33 (Medium)

- **Problem:** company details save and appear on documents (#1 fixed). CRM & Quote Defaults save but aren't used by new quotes, leads or clients (see Notification under Failing modules).

Airport — #18 (Low)

- **Problem:** a latitude of 200 shows "Latitude is required" instead of "must be between −90 and 90". The error now appears next to the field. Airports also have to be entered by hand with coordinates, which is hard for non-technical staff.
- **Fix:** correct the message. Consider filling airport details in from the ICAO code.

Instant Estimate — #38 (Low)

- **Problem:** the calculations are correct (#19 fixed). But after choosing a size and clicking Start a quote, only the route and passenger count carry over, not the chosen size or estimated price.
- **Question:** minimum hours apply per leg, so a round trip charges the minimum twice. Is that the intended pricing rule?

Aircraft — #17 (Low)

- **Problem:** year built 2099 and an empty weight bigger than the maximum takeoff weight were both accepted.
- **Fix:** cap the year at the current year, and check empty weight against takeoff weight.

Email Sending Queue and Email Templates — #22 (Medium), #37 (Low)

- **Working:** 5 of 6 email types arrived in Gmail on Oct 13 (quote, itinerary, payment reminder, operator email, invite), with merge fields filled in. Unknown merge fields are rejected.
- **#22 problem:** when a send fails (e.g. a rejected address), there's no warning, and the quote or itinerary is still marked Sent. The failure only shows under Email Templates → Sent.
- **#37 problem:** money in emails shows as "$12255.00" without the thousands comma.
- **Fix:** show failures straight away and only mark Sent once delivery is accepted. Format amounts as $12,255.00.

Clean modules, fixed issues and In Progress

No open issues (6):

- Operators: add, fleet count, used in sourcing.
- Trip Requests: create, edit, send to sourcing.
- Schedule: day and week views.
- Operator Payments: bill from the trip's cost, part payment, overpayment blocked.
- Transactions: client payments, operator payments and commissions, with totals.
- Task Board: create, assign, drag between columns.

Fixed and verified (6): Settings page missing (#1), blank client notes (#2), approving an operator before they've given a price (#8), invalid-email error (#10), withdrawing a pending invite (#14), Instant Estimate not updating after a rate change (#19).

In Progress modules (not counted as failures):

Module	What exists today
Import / Export	Export (XLSX, CSV) and a backup notice. No import yet.
PDF Generator	No PDF download on quotes or itineraries yet.
Client Portal	/portal exists and asks you to sign in. Not tested further.
AI Assistant	Opens with suggested questions. Sending a question froze the browser tab for over a minute.
